BASED ON

Sylus

ECOMMERCE
SOFTWARE
OFFER

Sell on any device

Our basic platform has a web API which allows creating mobile apps that might connect to your store and allows purchasing via them. It can also be integrated with any device that has a connection to the internet. We are always trying our best to make the layouts beautiful, simple, mobile-friendly and optimized to be as much simple in use as it is possible.

Many channels, countries, languages and currencies

COUNTRIES & ZONES

Decide which zones and countries you want to ship your products to and which products should be presented for specific country.

MULTIPLE CURRENCIES

Adjust your exchange rate and start with selling in each available currency.

MANY LANGUAGES

Do not limit only to your country. There may be many customers abroad who would like to make some purchases in your store.

MULTICHANNEL

Boost your sales by setting up many channels and adjust them for your needs.

We integrate with everything

Decoupled architecture allows to rapidly integrate with CRM, PIM, ERP software or any other third-party services (ex. SaaS, PaaS). Though apps we create are easy to scale and not expensive in maintenance.

Advanced marketing

Generating promotion codes, vouchers etc. was never easier. Want a general promotion divided into categories? Or maybe some coupons? Free shipment after €100 order? No problem! Do you want to know what your customers think about products? Reviews are also in our offer.

The screenshot shows a web application interface for creating a promotion code. The top navigation bar includes a menu icon, 'View your store', a search bar with 'Search products...' and a magnifying glass icon, a notification bell icon, and a user profile 'John' with a dropdown arrow. The main form is divided into several sections:

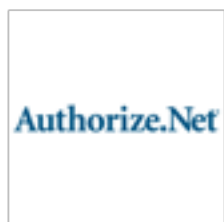

- Code & Name:** Two input fields for 'Code' and 'Name'.
- Description:** A large text area for a detailed description.
- Usage limit:** An input field for the usage limit.
- Priority:** An input field with the value '0'.
- Channels:** A section with a 'US Web Store' checkbox.
- Coupon based:** A toggle switch.
- Exclusive:** A toggle switch.
- Start Date & End date:** Two date pickers labeled 'Starts at' and 'Ends at', both showing 'dd/mm/yyyy'.

The bottom section is titled 'Configuration' and contains two main parts:

- Rules:**
 - Type:** A dropdown menu with 'Item total' selected.
 - US Web Store:** A checkbox.
 - Amount:** An input field with a '\$' symbol.
- Actions:**
 - Type:** A dropdown menu with 'Order fixed discount' selected.
 - US Web Store:** A checkbox.
 - Amount:** An input field with a '\$' symbol.

At the bottom of each configuration section is a red 'Delete' button with a trash icon.

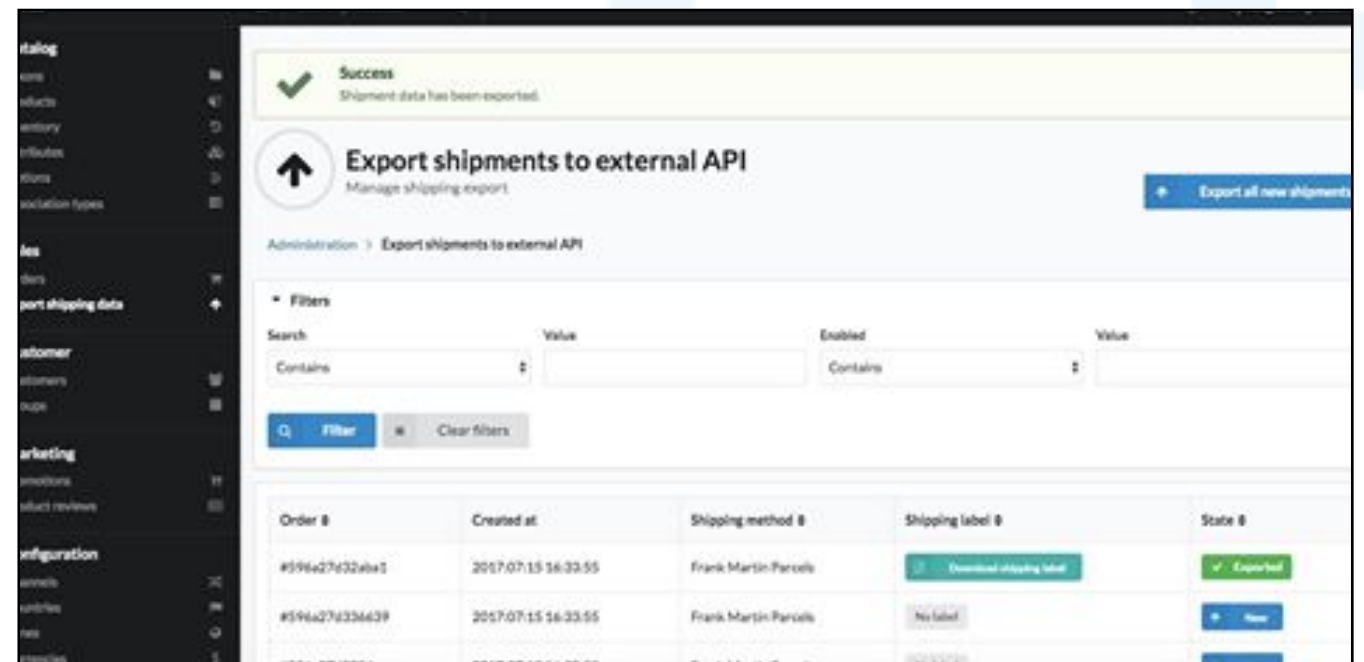

Support for many payment gateways

PayPal Express, Stripe Checkout, PayU and many more payment providers are also in the standard edition of the platform. Even if you use an exotic payment processor, it can be added at low development cost.

Shipping providers integrations

With our solutions you can easily integrate with any shipping provider. Your logistic team will no longer need to login to external courier apps and refill the required data. It is available to order a courier and print shipping label right from the admin panel.

Performance

Due to advanced technologies, we are working with, our product is ready to be put under high traffic and serve billions of data at real time. We know how important your customers time is.

Technical support

We know that the biggest challenge is not in creating an eCommerce platform but in maintaining and developing it for your needs. We will never leave you alone with your problems and our solutions are always put under paper warranty.

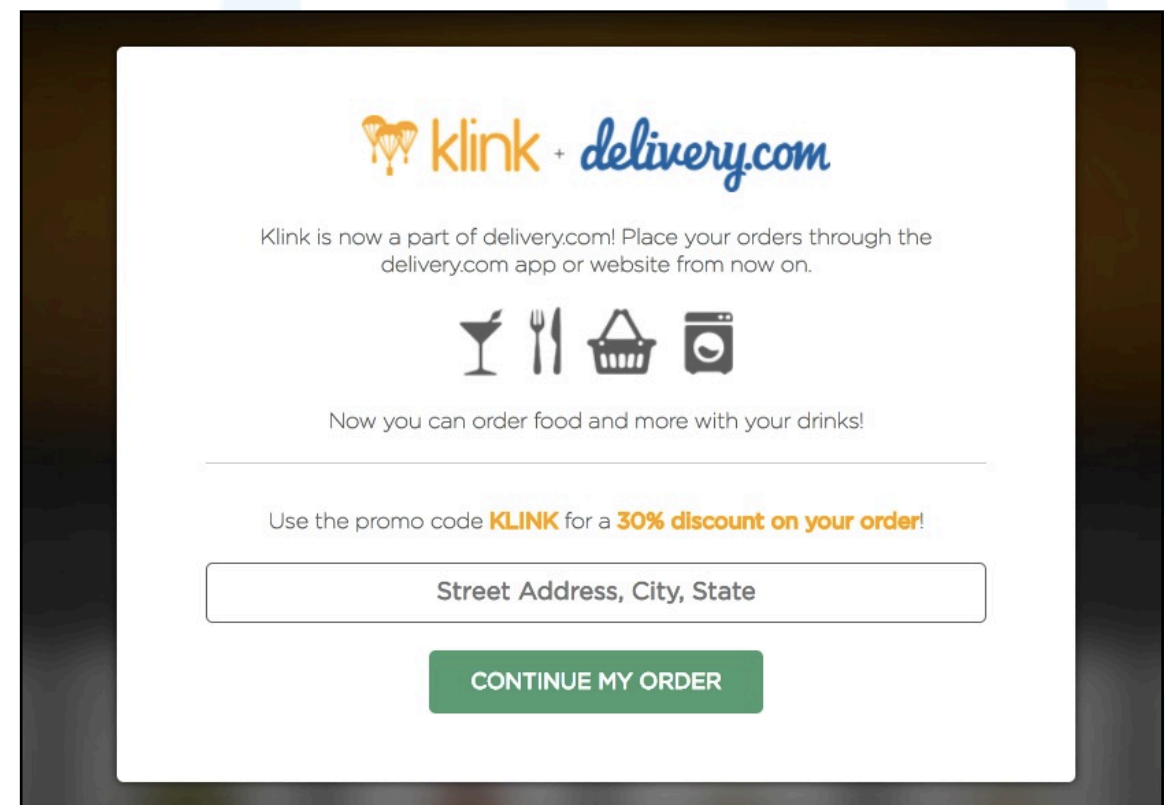

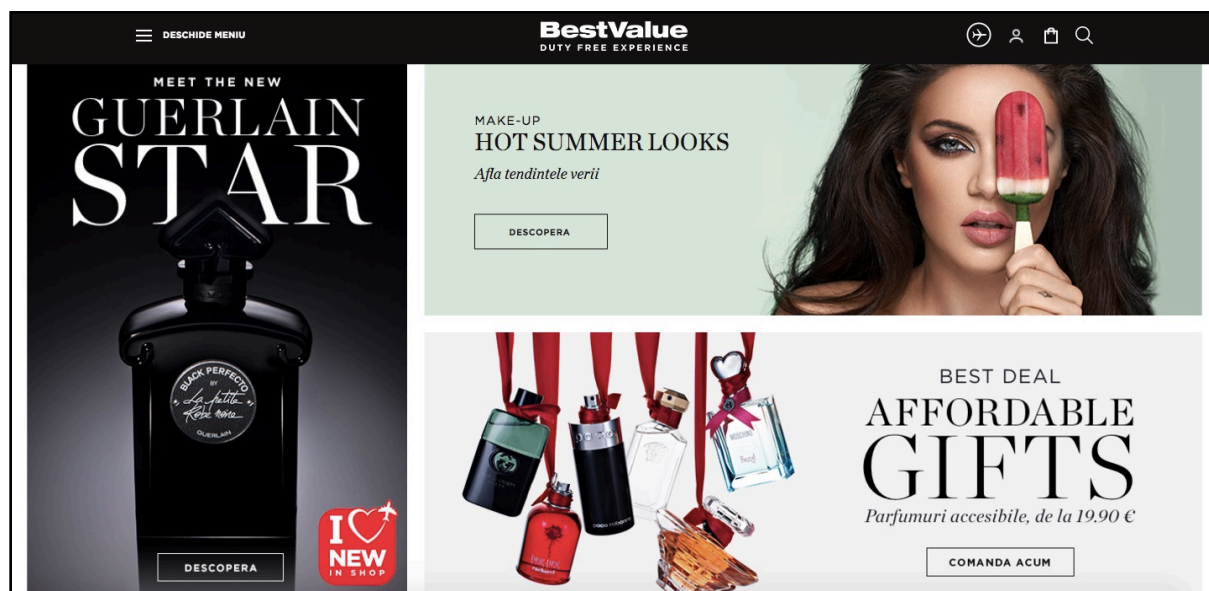

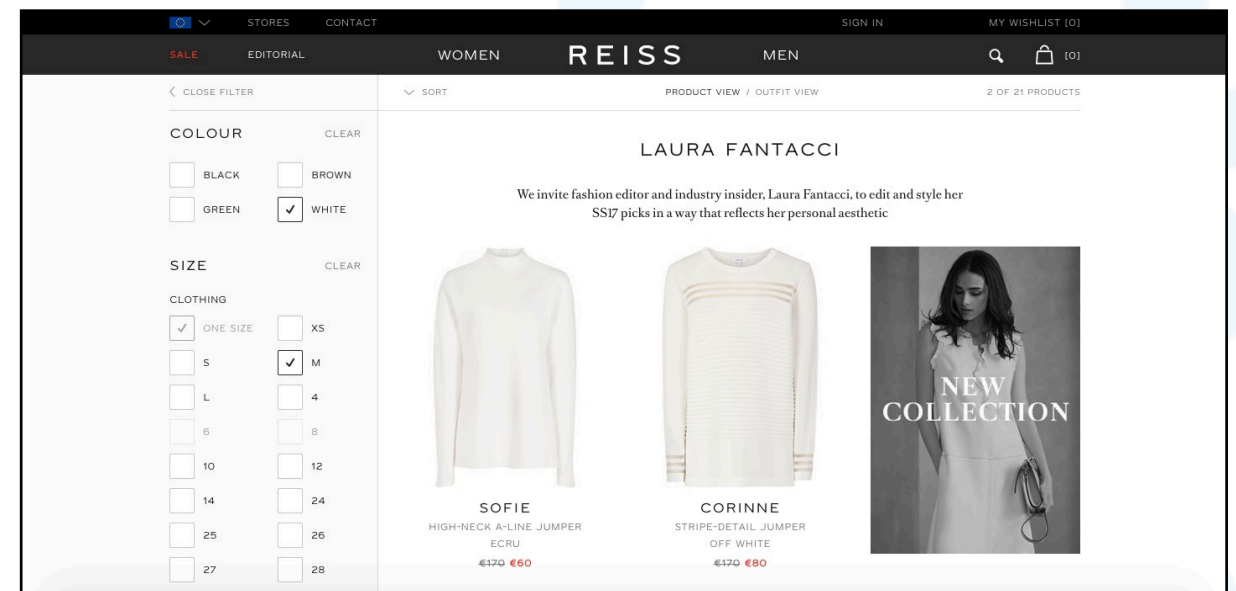

```
@managing_product_files
Feature: Adding product with files
  In order to sell digital goods in my store
  as an Administrator
  I want to be able to add a product with files

  Background:
    Given the store operates on a single channel in "United States"
    And there is a registered merchant with "bitbag" code
    And this merchant has one year subscription
    And the store has a product option "Subscription" with a code "subscription"
    And this product option has the "14 days" option value with code "14_days"
    And this product option has also the "30 days" option value with code "30_days"

@ui @javascript
Scenario: Adding a new simple product
  Given I want to create a new simple product
  When I specify its code as "the_police_roxanne"
  And I name it "The Police - Roxanne" in "English (United States)"
  And I set its slug to "the-police-roxanne" in "English (United States)"
  And I attach the "the_police_roxanne.wav" file to it
  And I add it
  Then I should be notified that it has been successfully created
  And the product "The Police - Roxanne" should appear in the store
```

What can we do with Sylus, the technology we are using?

<https://www.reiss.com>, <https://bestvalue.eu>, <https://klinkdelivery.com>
are only a few examples of what can
be done with us.
